Application Deployment and Migration in Zoho Creator

Aim

To deploy a Zoho Creator application from the development environment to the production environment and migrate the application components and data safely while ensuring that the application functions correctly.

Hardware & Software Requirements

Category	Tool / Environment Specification	Purpose
Platform	Zoho Creator Professional / Education Edition	Low-code application engine and deployment manager
Browser	Google Chrome / Microsoft Edge / Mozilla Firefox	Modern web browser interface for IDE and deployment console
Environment	Multi-Tier Setup (Dev → Stage → Production)	Application lifecycle management and release staging
API & Tools	Postman / Data Export-Import Utility	REST API verification and data migration

Procedure

1. **Select Target Application:** Open Zoho Creator and select the application to be deployed from the workspace dashboard.
2. **Verify Configuration:** Verify that all forms, reports, pages, workflows, and Deluge scripts are configured correctly in the development environment.
3. **Execute Pre-Deployment Testing:** Test the application to ensure that data validation, workflows, and report generation work as expected.
4. **Navigate to Environments:** Navigate to the Environments section and select the application that needs to be deployed.
5. **Review Component Delta:** Review the application components and configuration changes that need to be moved to the target environment.
6. **Trigger Deployment:** Select the appropriate deployment option and deploy the application to the production environment, following the available prompts.
7. **Configure Target Settings:** Configure the necessary connections, permissions, integrations, and environment-specific settings in the target environment.
8. **Execute Data Migration:** If data migration is required, export the required records from the source environment and import them into the target environment using the supported import options.
9. **Verify Live Application:** Open the deployed application and verify that forms, reports, workflows, and pages work correctly.
10. **Monitor & Troubleshoot:** Monitor the application after deployment and resolve any errors identified during testing.

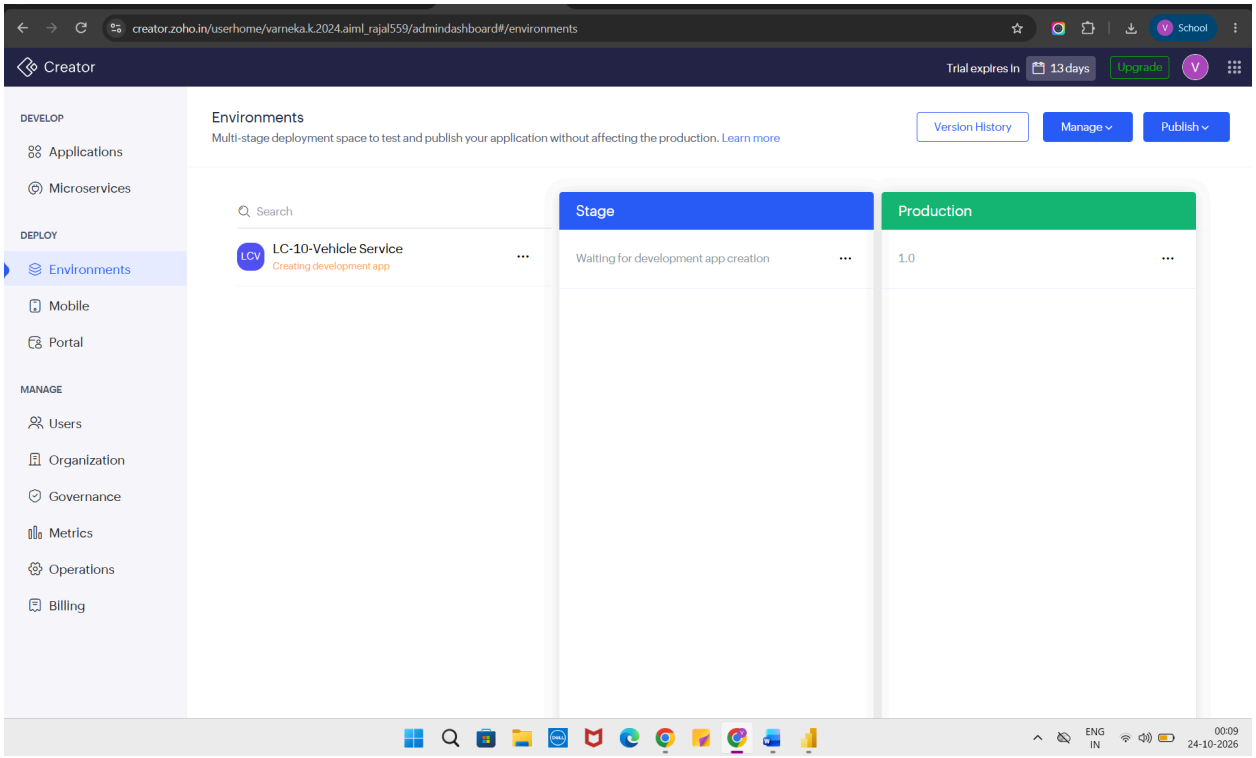

Deployment & Verification Matrix

Component Type	Source (Development) Status	Target (Production) Status	Verification Outcome
Forms & Subforms	Built & Validated	Published to Production	Verified

Component Type	Source (Development) Status	Target (Production) Status	Verification Outcome
Reports & Dashboards	Configured & Filtered	Accessible via Live URL	Verified
Workflows & Deluge	Active in Dev Sandbox	Live Automation Enabled	Verified
Integrations & APIs	Test Credentials / Tokens	Production OAuth & Connections	Verified
Role-Based Access	Dev Admin / Internal Roles	Production RBAC & Profiles Active	Verified

Result

The Zoho Creator application was prepared for deployment and migration by validating its components, transferring the required application configuration and data, and testing the target environment. This process helps ensure a smooth transition from development to production with minimal disruption.
